Tunica Albuginea Fibrosis
Joseph Junewick, MD FACR
11/24/2010

History
Teenage football player with intermittent scrotal pain.

Diagnosis
Tunica Albuginea Fibrosis

Discussion
Diffuse fibrous pseudotumor of the scrotum, also known as fibromatous periorchitis, represents a benign reactive proliferation of inflammatory and fibrous tissue. It is probably related to chronic irritation (repetitive trauma, infection, surgery or inflammation). At sonography, thickening of the tunica with linear calcifications or confluent nodular masses.

Findings
US - Hyperechoic plaque-like thickening of the tunica albuginea some demonstrating calcifications. Incidental note is made of a few scattered testicular microliths.
